
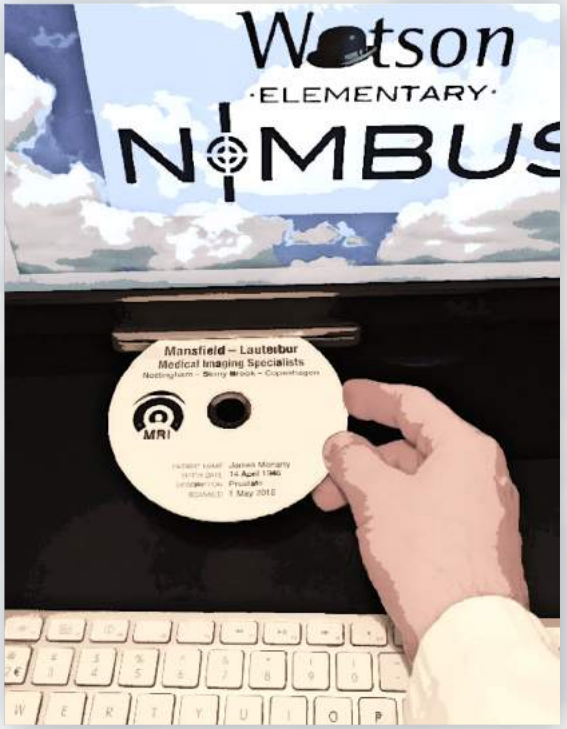
Effortlessly translating mp-MRI into clear biopsy targets

Effortlessly translating mp-MRI into clear biopsy targets

- Using just T2W & DWI, Watson Elementary Nimbus enables you to reliably define biopsy targets based on
  - Automatic ADC map with absolute value indication
  - Automatically computed high b values above acquired (Hi-C® technology)
  - Automatic 3D fusion of T2W and diffusion images
  - Automatic ROI suggestion (MAI® technology)
- Easy delineation of biopsy targets & export to fusion biopsy systems, or use for cognitive fusion

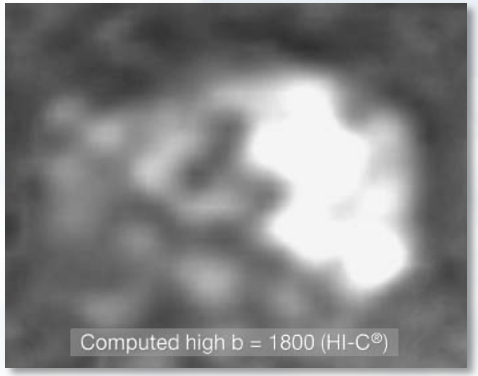
Effortlessly translating mp-MRI into clear biopsy targets

Take any prostate MR image set

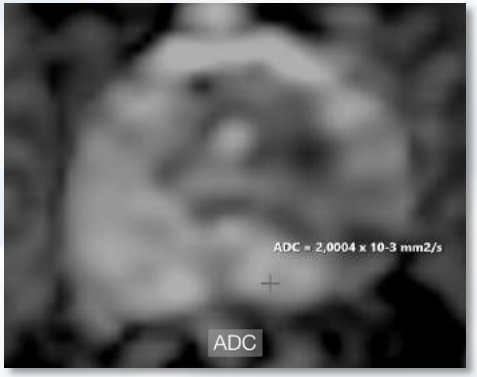


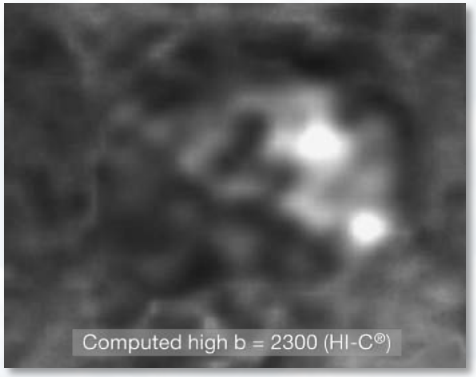
Effortlessly translating mp-MRI into clear biopsy targets

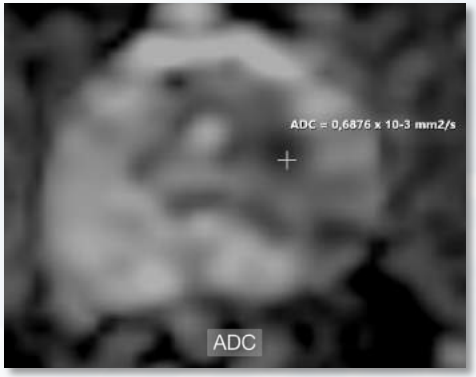
Take control with smart & simple tools



Reliable & clear lesion confirmation based on computed high b values (Hi-C®) & absolute ADC values

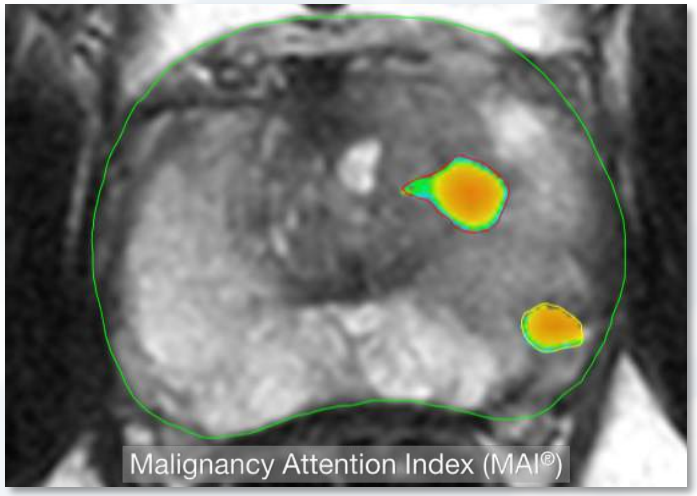




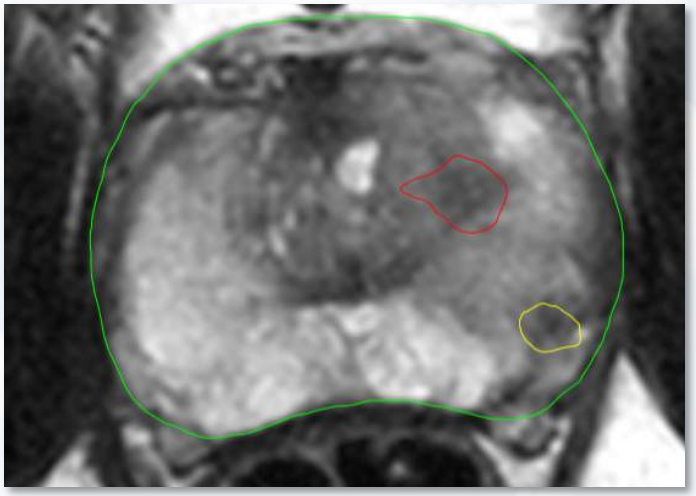


Effortlessly translating mp-MRI into clear biopsy targets

Convenient tools for easy reading and target definition



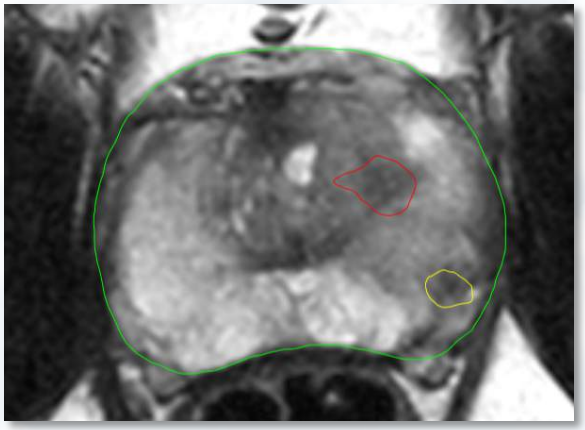
Automated ROI suggestions



Fast target & prostate delineation

Effortlessly translating mp-MRI into clear biopsy targets

Take aim



Export biopsy targets
& structures to
fusion biopsy system

Or use them for
cognitive fusion

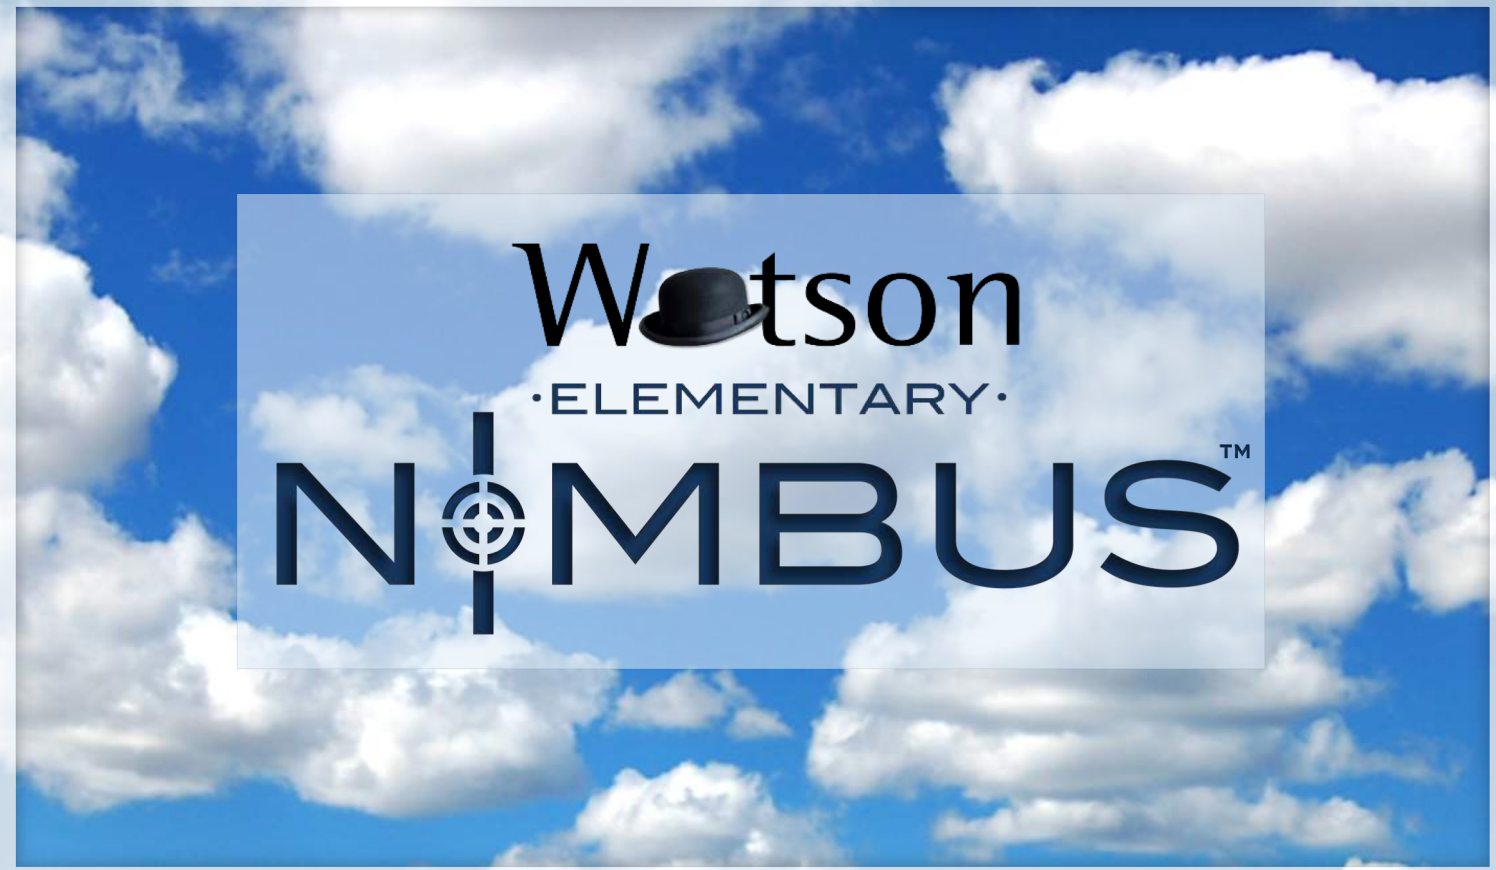
SOFTWARE

Making sense of multiparametric MRI for prostate cancer

- Eliminates interpretation of confusing reports
- Accepts almost any prostate MR image set with T2W and diffusion images (no DCE required)
- Automatically computed high b values using exclusive Hi-C® technology
- Automatic quantitative ADC map with absolute values
- Automated ROI suggestion based on MAI® technology
- Digital export of delineated structures to fusion biopsy systems preventing translation errors



Making sense of mp-MRI for PCa

INSTANTLY, RELIABLY, INDEPENDENTLY.
